The housing market – Drivers of the housing market

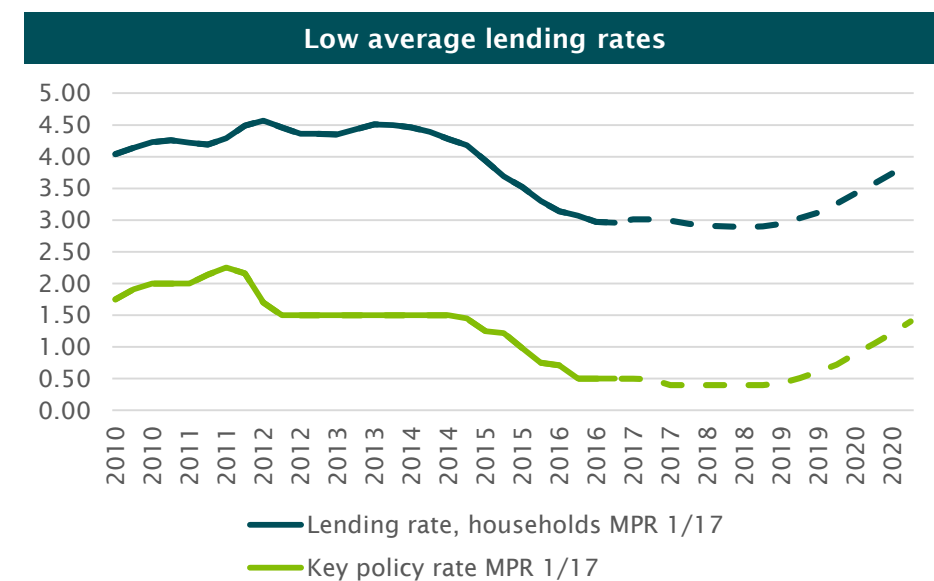

Source: Statistics Norway, April 2017

1) Akershus, Buskerud, Hedmark, Oppland, Telemark, Vestfold og Østfold

- Shortage of new housing supply and a strong population growth have been significant drivers of the strong price growth in the Norwegian housing market since 2008
- New home construction is up from the record low levels of 2009 and 2010 and has recently evolved towards the higher end of the range. This should mitigate the momentum on house prices going forward
- The population growth of 0.92 % p.a. since 1997 has been driven both by excess birth rate (37%) and net immigration (63%)
- Low average lending rates for households
